production details

EDM Today uses computer-to-plate technology. All advertisers are requested to supply digital files using the following file formats:

Press Optimized

PDF Files Required: Submitted PDF files must meet Adobe PDF/X-1a:2001, version 1.3 specification. All font and high-resolution image data must be embedded within the file. Images must be at least 300dpi. **Only CMYK color can be used.** Files using RGB or spot colors or saved to PDF versions higher than 1.3 may produce unfavorable results.

Files also accepted:

- Quark XPress, Adobe Photoshop or Adobe InDesign

Files Must Include:

- All pictures in TIFF or JPEG and all printer and screen fonts
- Color: **CMYK Mode**
- Embedded images: 300 dpi for full color artwork or grayscale
- Storage: **EDM Today** does not keep a copy of electronic files. Advertisers should retain an original copy.

Magazine Size:

- Trim size: 8.375" x 10.875"
Live matter should be kept 1/2" from trim
- Bleed size: 8.625" x 11.125"

Note: For help with ad specifications & setup, refer to our Ad Preparation Guide located under the Advertising tab on our website.

Agency Discount

15% is allowed to advertising agencies providing ad files, only if payment is made within 30 days of invoice.

(15% advertising discount does not apply to marketplace ads)

News Releases

We invite all EDM industry suppliers to supply news releases concerning new products or company information for publication in **EDM Today**.

We will also post advertisers' news releases to the Breaking News section of the edmtodaymagazine.com web site.

guidelines for cover story articles

A Cover Story typically consists of the magazine front cover and an accompanying four page article. The length of the edited article depends upon the amount of information and number of photographs supplied by the advertiser and is at the discretion of the Editor. Cover Story participation is contingent upon the advertiser committing to a full page 4-color ad in the same issue.

The Cover Story concept provides a win-win opportunity for the reader and the advertiser, since the reader is exposed to interesting new technology and applications while the advertiser gets front cover recognition, premiere exposure, and the opportunity to tell his story to a uniquely targeted audience.

It is important to note that in the overall scheme of things, the reader's interests must be given the highest priority since if the reader either skips over the cover story or abandons it after only reading a few paragraphs, nobody's interests are well served.

Thus, Cover Story program participants must be keenly aware that a cover story must be substantially more than a paid advertising plant. The Cover Story will provide the advertiser with the opportunity to build his brand's credibility and promote his products. However, that must be accomplished within the fabric of a story that is both interesting and informative, exposing the reader to new technology and its benefit to real world applications that might benefit him.

An excellent Cover Story is the result of a partnership between the advertiser, the Editor, and our graphic artist, who brings all the elements together into an aesthetically pleasing cover and article. The final details of the layout of the Cover and the accompanying article are at the discretion of the Editor.

An excellent Cover Story is the result of a partnership between the advertiser, the Editor, and our graphic artist, who brings all the elements together into an aesthetically pleasing cover and article. The final details of the layout of the Cover and the accompanying article are at the discretion of the Editor.

case study guidelines

Premium Graphite Grade Lowers Total Job Cost

Over the past couple of decades, significant performance improvements have been made in EDM Sinker technology. As a result of these improvements, CNC Sinker can now complete jobs without significant operator intervention. However, these improvements have led to a false sense of security that the machine will perform to its optimum, regardless of the electrode material used. We decided to conduct a test to determine the effect different graphite grades have on the total cost of a job processed in a CNC Sinker.

	80% Graphite	90% Graphite	95% Graphite
Electrode Cost (3 electrodes)	\$18.00	\$20.00	\$25.00
Surface Finish in cavity	3X VDI	2X VDI	N/A
EDM Burn Time	2:12:18	2:14:48	2:14:21
EDM Cost (\$50/hr)	\$163.80	\$167.40	\$167.10
Total Cost	\$181.80	\$187.40	\$192.10

Results: As can be seen in the chart, the total job cost was 42% lower with the more expensive electrode material. In this case, the coarser microstructure of the electrode...

A Case Study is a one to two page story with photos that illustrates the successful application of an advertiser's technology to solve a customer's problem. The EDM Today Case Study program is subject to the following:

- All Case Study submissions are subject to Editor approval.
- The subject of the Case Study must related to EDM in some way.

There will be no charge for publishing a Case Study, however the advertiser will be required to place a minimum 1/3 page full color ad in the issue containing the Case Study.
