Press Release - For Immediate Distribution

EROWA MTS 2.0 – Improvement on Success

EROWA's zero-point tooling system, MTS (Modular Tooling System) was introduced in 2001 and complimented with the advanced MTS+ in 2008. EROWA is now presenting the MTS 2.0 which combines the advantages of both versions into one single product!

Arlington Heights (April 1, 2016) – With total monitoring feedback, a maximum clamping power of 20,000 N and enhanced precision, the new MTS 2.0 fulfills even the most exacting machining demands.

The use of state-of-the-art ceramic lock balls combined with innovative springs increase clamping power while allowing an opening pressure of only 6bar. The MTS 2.0 also only needs 6 bar of pneumatic pressure for the "re-clamping" function which results in a clamping power of 20kN per chuck. This is an improvement of 60% when compared to the previous MTS models.

Used for single or multiple palletization, the pallets and the spigots of MTS 2.0 are compatible with the previous version and can be seamlessly integrated to any existing automation system.

About EROWA Technology, Inc.
EROWA Technology, based in Arlington Heights, IL, is a full service supplier of palletization and automation systems for the North American manufacturing market. Our goal is to provide complete turnkey solutions for precision parts handling through most any group of manufacturing processes (from one type of machine to the next). We are capable of providing a simple manual palletization system or a fully integrated, custom designed workholding and automation system to meet the current needs and expectations of our customers.
